Ben and Sherry Andrews

Anne and Frank Taylor

These SVR Bulls will build and maintain the optimum cow herd. They will sire moderate replacement females that have structural integrity, excellent teat and udder structure, good mothering ability and docility, and which will breed back with regularity. The Bulls' sale calves - steers and heifers - should be sale toppers and improve the profitability of your herd.

These are our best Bulls produced to date. We know they will work well for you if, for no other reason, each one of them calved on their own, unassisted on the ranch. That is a measure we treasure, especially at 2:30 in the morning.

Another measure we use to judge our program and its profitability is the price paid at the sale barn for our commercial calves - pedigreed calves that we determined not to include in our registered herd or sell as registered seedstock. Five out of the last six years, our commercial calves have topped the Nebraska sales for either the week or the month of their sale. One of the purchasers remarked: "I come back year after year, because I never lose money on your calves. They explode when I put them on feed, and I don't have any problems with them."

In the one year that was the exception, one of our customer's calves topped ours. We're happy for him and proud of our bulls.

**The Sires.** This sale features sons of tremendous SVR bulls and of some of the greatest Angus sires of all time: Columbus of Wye (Lots 6, 8, 15, 16, 31, 33, 34, 39, 44, 45, 53, 64, 67, 73 and 75); RR Rito 707 (Lot 52); F0203 (Lots 4, 13 and 41); Rito 707 of Ideal 533 70 (Rito 149) (Lots 32 and 60); Rito 054 GDAR (Lot 61); OCC Broadside 876B (Lots 25, 54, 68 and 76); Sinclair Express 6V47 (Lots 4, 14, 30, 65 and 66); and Alap of Wye (Lots 20, 28, 47 and 74). The Bulls' mothers are outstanding.

**The Foundation Females.** Our Bulls stem from an exceptional set of Foundation Females and their daughters.

**SCC Enchantress 3F1 X412** is a 5522 daughter who produced SVR Revolution 3173 shown on the front cover. Her grandam came to Tom Elliott from the Coffey herd,

which, we understand, Tom culled for only the finest teat and udder structure. Her dam produced the mother of N Bar Shadow, known for producing excellent females. 5522 is the father of EXT. She is a great mother, and very docile. We like her length of spine and frame.

**Sinclair Lady Ida 04F3 B154** is a 5522 daughter who has an inbreeding coefficient of 25.33%. She adds base width, mothering ability, fleshing ability, range adaptability and teat and udder quality. She stamps her offspring. It is amazing that, despite her linebreeding, we can further linebreed her and still obtain excellent performance and phenotype.

**Queen Mother of Wye UMF 9141** stamps her cattle, just like 04F3. The Wye program measured its animals through its matriarchs. The leading matriarch was Blythe of Wye who was the top Four-Ton Cow (meaning she produced four tons of weanlings over her life). 9141 is Blythe's granddaughter. When we breed Emulation or Rito cattle to her, the calves are phenomenal.

**Coleman Dixie Erica 143** was intensively line bred to Traveler. She added frame and power to Emulation cattle, without overpowering their maternal ability. Her progeny are often at the top of sales around the country.

**Copeland of Wye UMF 9918** is a solid Wye animal whose pedigree has generations of proven Wye performance that simply works on the range.

**BAX Aspen Lady 844-72 and BAX Alicia Queen 784-6310** were both sired by Paramount Ambush 2172 and are out of Viking daughters. They are Bonsma-style and produce phenomenal sons and daughters. They do not miss.

These Foundation Females have contributed mightily to our herd. All of these Foundation Females are based upon decades of proven performance. History does not lie.

**Selection Process.** Our selection process is most rigorous. We begin with the mother cows, the foundation of traditional Angus genetics.

Our cows must maintain excellent fertility and be long-lived. They must be phenotypically correct, feminine and angular, so they calve easily. They must feed their calves properly and cover large amounts of country during the summer. We cull females that have poor dispositions, poor legs and feet, inferior teat and udder structure and low-quality milk. We strive for a mother cow that can wean a calf of at least 50% of her body weight.

Our AI and herd sires must be masculine and breed with vigor. They must sire outstanding animals that have excellent carcass quality, proper phenotype, quiet dispositions and pass on superior genetics. Although we stress maternal genetics, we use bulls that sire excellent males **and** females, and pass on the best traits of the traditional Angus breed.

**The Calves.** At birth, each calf is tagged, weighed and handled on foot. The mother cannot be overly defensive and it cannot run away. The calf must get up and suck on its own quickly. The cow needs to pair up and take her calf when pairing out. If the mother and the calf do not meet these criteria, they are culled.

To aid in our selection process, we also "sample" our calves. They consistently

grade “choice” - on grass and forage alone. If a particular type of mating can't meet that objective, we do not continue that breeding.

**Final Selection of the Herd.** There are two final steps in the selection process. All our animals must be easy to handle. We will not tolerate animals that are difficult to handle, regardless of any other characteristics.

The environment makes the final cut. If an animal can't make it on our native grass, supplemented with salt and mineral, then the environment has culled that animal from our herd.

**SVR Bulls.** SVR Bulls were bred to thrive on the range and on forage. We developed them slowly and on forage to promote proper skeletal and muscular development. They aren't hiding behind fat and tons of feed. They will last and will not require extra feed. We want our Bulls to thrive during breeding season, and not “melt” as “finished” bulls so often do. Customers often tell us that SVR Bulls gain weight during breeding season on the range.

SVR Bulls transmit structural soundness, fertility, superior teats and udders, functionally low birth weight, balanced growth and outstanding carcass quality. They will transmit traditional Angus maternal goodness.

These two year olds have the proper phenotype, promise calving ease, and have excellent dispositions. They will stamp your calves, assuring uniformity in your calf crop.

We have evaluated the Bulls for libido, fertility, good temperament, physical ability, soundness, athleticism and carcass quality. By taking time to develop them properly, we are confident in their ability to help create the optimum cow herd.

You can see the Bulls at our ranch (directions are provided at [www.svr-angus.com](http://www.svr-angus.com)), at the Burwell Livestock Market one day prior to Sale Day, or online at [www.dvauction.com](http://www.dvauction.com). The log in page for viewing the bulls and bidding is:

**<https://www.dvauction.com/events/77242>**

Simply copy and paste either DVAuction link into your internet browser and hit Return.

You can also view the Bulls on our website, [www.svr-angus.com](http://www.svr-angus.com). Please visit the website to learn about our program and see our Herd Bulls, the AI sires and our Foundation Females. You can also watch The American Rancher program that featured our ranch, its history and the history of the Nebraska Sandhills.

These 70 Registered Black Angus two-year-old Bulls embody Timeless Genetics for Today's Profitable Producer®, and will thrive for you. We challenge you to find any other set of bulls that combines the best genetic traits of the Aberdeen Angus breed. Please come to our sale, and see the difference!

Have a great 2018!

# 2018 ANGUS BULL SALE

Friday, February 2, 2018 • 1 p.m. CST  
Burwell Livestock Market • Burwell, NE

**LOCATION:** Burwell Livestock Market, 401 S. 11th, Burwell, Nebraska. The Livestock Market is located in the southwest part of town, west of the water tower.

**SALE TIME:** 1 p.m. CST. Free lunch to bidders, 11:30 A.M.

**AUCTIONEER:** Col. Mike Baxter

**CONSULTANT:** Ken Brubaker 540.908.5799

**VIEWING:** You can see the Bulls on the ranch (directions at [www.svr-angus.com](http://www.svr-angus.com)), or one day prior to Sale Day at the Burwell Livestock Market. You can also view videos online at [www.svr-angus.com](http://www.svr-angus.com) or [www.DVAuction.com](http://www.DVAuction.com). Our log in page for viewing and bidding is <https://www.dvauction.com/events/77242>. We elected not to include photos in the sale book, because the Bulls are best viewed either in person or video.

**HERD HEALTH:** All Bulls will have passed a breeding soundness examination and fertility test, administered by Dr. Chere Stephen, DVM, Sandhills Animal Health Center. All Bulls were vaccinated with Pyramid 5 Presponse SQ, Vision 7 Somnus, and Poured. All are virgin Bulls. Our entire cow herd is AM Free, NH Free and CA Free. Dr. Stephen will be present to provide health certificates for same day shipment.

**SALE DAY PHONES:**

**Sale Barn:** 308.346.4257

**Ben:** 402.382.8181

**Todd Eberle** (Sale Barn Mgr.) 308.870.1783

**Col. Mike Baxter** (Auctioneer) 402.394.5686

**Drew Feller** (Angus Assn.) 402.841.4215

**Kristian Rennert** (Angus Assn.) 970.218.9208

**Chris Beutler** (Midwest Messenger) 402.380.8244

**ONLINE BIDDING:** As described on the next page, you may bid online through [www.DVAuction.com](http://www.DVAuction.com). The specific link for <https://www.dvauction.com/events/77242>.

**ABSENTEE BIDS:** If you cannot be with us on Sale Day, and would like for us to place a bid, we will confidentially and honestly handle any bids for you. Please call any of us at the phone numbers listed above.

**VOLUME DISCOUNT:** SVR offers a \$100 discount on the third Bull purchased at this sale by the same buyer, and \$100 off each additional Bull purchased by the same buyer.

**LOT NUMBERS:** Sale book numbers for the Bulls will correspond to right ear tags. Sale order is sale book order.

**DELIVERY:** Free Delivery within 250 miles of SVR. Over 250 miles, SVR will help coordinate delivery to the nearest convenient sale barn facility possible for our trucker and you. Sales totaling \$5000 or more will have a maximum delivery charge of \$300 per head anywhere in the lower 48 states. Sales totaling less than \$5000 will be delivered at cost. Bulls picked up sale day will receive a \$50 discount. Call Ben at (402) 684-3308 if any questions.

**GUARANTEE:** SVR will guarantee breeding soundness for the first 90 days, unless injury or death is caused by the buyer's negligence or an Act of God, such as lightning. SVR must be notified promptly of the Bull's breeding disability. SVR will work with the buyer and (i) replace the Bull with a comparable animal if SVR has such an animal; or (ii) credit the buyer with the purchase price, less salvage value, at SVR's next sale.

**RETAINING:** 1/3 Revenue Sharing and semen and certificate interest in all Bulls in the Sale Book, unless noted on sale day. Buyer has full possession and full salvage value. Should SVR want to collect the Bull at a later date, it will be at the buyer's convenience and at SVR's expense, without premium.

**STORM DATE:** We will work with the Burwell Livestock Market to announce on the radio whether the Sale has been cancelled because of a storm and a new sale date. We will also try to announce such event online and on [www.DVAuction.com](http://www.DVAuction.com).

**TERMS AND CONDITIONS:** Cattle will sell under the suggested Terms and Conditions of the American Angus Association ([http://www.angus.org/Pub/suggested\\_scale\\_terms.pdf](http://www.angus.org/Pub/suggested_scale_terms.pdf)). All cattle are the buyer's property and the buyer's responsibility as soon as the gavel falls. All purchases must be paid in full prior to load. Health papers will be the buyer's responsibility if the buyer does not take possession within thirty days. Any changes made after printing of this sale book and disclosed on the website or noted on Sale Day shall control.

**LIABILITY:** All persons attending the sale do so at their own risk. Neither SVR nor Burwell Livestock Market assume any liability, legal, at equity or otherwise, for any accident that may occur.

**INSURANCE:** Insurance will be available to buyers on sale day by James F. Bessler, Office: 630.945.3483, Cell: 816.762.2641, [JamesFBessler.com](http://JamesFBessler.com).

**MOTELS:** Pump and Pantry Motel, Burwell • 308.346.4607  
Rodeo Inn, Burwell • 308.346.4408

A "+" before the registration number indicates an ET calf.

EPDs current as of Dec. 8, 2017. Updated EPDs can be viewed online at [www.angus.org](http://www.angus.org).

**COMMENTS FROM THE SALE MANAGER:**

**SPRING VALLEY ANGUS RANCH -  
THE MOTHER CHURCH OF REAL WORLD LOW INPUT ANGUS SEEDSTOCK.**

Spring Valley Angus has one of the most unique programs of raising realistic, low input Angus seedstock to be found anywhere in the world.

At Spring Valley an abundance of forage and roughage is maintained and used on a daily basis for the cow herd as well as the development of the young cattle. In building the program at Spring Valley only the best tried and proven genetics have been used. From the standpoint of genetics and nutrition, never has a shortcut been tolerated.

As we look at the 2018 offering, what a treat, sons of the world famous Columbus of Wye. I have always thought he was the very best Wye bull I had ever seen. The folks at Spring Valley were fortunate enough to get semen on this historic sire. Columbus of Wye and his sons bring a lot to the table from the standpoint of overall goodness of Angus cattle. You will like them.

The Spring Valley program is one of the most unique in the industry, you will find these bulls have the durability and ability to gain weight and continue to grow while breeding cows.

I look forward to seeing you at this important Angus sale.

Sincerely,  
Tom Burke

# SVR BULLS

**PBC 707 1M F0203**

**PBC 707 1M F0203** was the most noteworthy achievement of the Pioneer Beef Cattle program. **F0203's** fame developed years after his death, and many herdsmen wished they had used him more. He is known for siring great females such as Bemindful Maid DHD 0807, the mother of DHD Traveler 6807; Dixie Erica of CH 1019, the mother of several grand Ohlde bulls, including OCC Emblazon 854E; Blackbird of RR 1204, the mother of RR Hero 6267 and several top flight Ohlde bulls; and several other excellent females. He didn't disappoint with his sons, either, siring RR Rito Highroller 8025, RR Rito Highroller 9354 and Schearbrook Classic. **F0203** earned a progeny weaning ratio of 102 on nearly 1,100 head and a progeny yearling ratio of 103 on more than 600 head with nearly 400 daughters in the AHIR program who posted a collective progeny weaning ratio of 101.

We recommend using Lot 4 on well-developed heifers or running age cows because of an actual birth weight of 84 lbs. Lot 4's mother, the 844 Foundation Female, has an IMF ratio of 109/2 while his sire, Express 6V47, ratios 110 on his progeny. (We've used 844 mostly as a donor.) His daughters should make great brood cows and steers should grow and grade. 844 has sons by Emblazon, Candolier Forever 376, and Homer serving as herd sires in our registered herd and in several of our customers' herds. This mating should create maternally efficient and carcass quality cattle. Lot 4 is a flushmate to Lots 31 and 66.

A **Cow Bull**, Lot 5 is sired by F0203, a reference sire whose semen was sold by the American Angus Association, which was used here. This mating capitalizes on the best maternal genetics from Emulation and Wye, adding the power of F0203. Lot 5 will produce masculine bull calves, with muscle and fleshing ability, and feminine, fertile, maternally wedge-shaped females. A daughter out of Lot 5's mother sired by Manning of Wye UMF sold for \$15,000 at the 2017 Cotton Angus Production Sale. Lot 5 is a full Brother to Lots 13 and 42.

This **Heifer Bull** is a son of Columbus of Wye. Many regard Columbus as the best bull produced by the Wye Plantation, and close to "ideal." Widely regarded as a "legend", Columbus was valued at \$135,000 in 1968, which is \$4.32 million in today's dollars. Lot 6 is a son of 3F1, one of our most prolific Foundation Females from the N Bar Enchantress cow family. She has several sons serving Registered Angus breeders: SVR Revolution 3173 at Hyline Angus in Montana; SVR Revolution 4129 at Foes Angus in South Dakota; SVR XXP Enchanted 5135 at Finks Beef Genetics in Kansas. SVR Cornerstone of Rose 1112 and SVR Revolution 4134 are making their mark in our own herd. 3F1 boasts an impressive WW ratio of 9 at 104 and YW ratio of 7 at 101. Lot 6 is a flush brother to Lot 32.

This **Cow Bull** comes from our Lucy 420 cow family, which combines the length and fleshing ability of the proven Rito 149 with E31, the easy keeping foundation of N Bar success. His sire's pedigree brings the spring of rib of F0203 and E31. The New Zealand bull 41/97 provides a bit of outcross for some pop. Fourteen years old, Lucy 420 just weaned another nice bull calf that will soon be a sale feature. Over twenty Lucy 420 daughters are in our herd. 420 ratios 6/103 for WW and 4/104 for YW. With his mass and muscle, 6147 should sire tremendous sons, and through his maternal genetics, excellent females.

## SVR COLUMBUS EDDA 6116

This Columbus son, a **Heifer Bull**, is out of one of our Foundation Females - 04F3. We think so highly of 04F3 that we have retained 35 daughters in our registered herd. Three sons, sired by Lodge of Wye, OCC Eureka, and Candolier Forever 376, form an impressive herd sire battery for us. Many of our customers have sons have daughters in their herds, as well. 6116 should add depth, fleshing ability, range adaptability, and thickness. He is a flushmate to 15.

**Columbus of Wye** was probably the greatest bull produced by the Wye Plantation. As Tom Burke pointed out: "As an individual, Columbus of Wye was a phenotypic standout with tremendous balance and overall quality, coupled with performance and maternal characteristics that made his descendants widely popular." Columbus weighed 80 pounds at birth, 605 pounds at 205 days, 1,184 pounds as a yearling, and 2,396 pounds as a mature animal. He "qualified as a Certified Meat Sire and left both outstanding sons and daughters. He enrolled 380 daughters in the then emerging Angus Herd Improvement Records program."

Sired by Bush Ranger, a full brother to the legendary N Bar Shadow, we recommend using Lot 9 on **well-grown heifers or running age cows**. We flushed some of our Foundation Females to both Shadow and Bush Ranger, and we think the Bush Ranger progeny are a bit better than those sired by Shadow. Lot 9's mother has done a very good job for us, and several of her sons are working in the herds of commercial customers. For testing purposes, we harvested a brother as part of our test for grass fed and finished beef at less than 30 months of age. He weighed 1300 pounds and graded Choice and Yield Grade 1. This is a great female and carcass sire prospect! Full brother to Lot 12.

We recommend using Lot 12 on well-grown heifers or running age cows. Lot 12 is a flushmate to Lot 9. Both are sired by Bush Ranger, a full brother to the legendary N Bar Shadow. If you really want to improve your herd, buy both of them. Lot 12 is a great female and carcass sire prospect, just like his full brother, Lot 9.

This Cow Bull prospect is sired by F0203, a reference sire whose semen was sold by the American Angus Association, which was used here. This mating capitalizes on the best maternal genetics from Emulation and Wye, and adds the power of F0203. Lot 13 will produce masculine bull calves, with muscle and fleshing ability, and feminine, fertile, maternally wedge-shaped females. A daughter out of Lot 13's mother sired by Manning of Wye UMF sold for \$15,000 at the 2017 Cotton Angus Production Sale. Lot 13 is a full Brother to Lots 5 and 42.

This Heifer Bull is a Columbus son out of one of our Foundation Females - 04F3. The influence of 04F3 runs throughout our program and in many of our customers' herds. We think so highly of 04F3 that we have retained 35 daughters in our registered herd. Three sons, sired by Lodge of Wye, OCC Eureka, and Candolier Forever 376, form an impressive herd sire battery for us. Lot 15 should add depth, fleshing ability, range adaptability, and thickness. Lot 15 is a flushmate to Lot 8.

We recommend Lot 16 for large, well-developed heifers or running age cows. He should sire extremely efficient and long-lived females and produce prepotent maternal influencing sons. His dam, 784, is a Foundation Female and a prototypical Bonsma kind. She has eight daughters in our herd, and two herd sire sons. Her sire and 6150's grandsire, Paramont Ambush 2172, produced 270,000 units of semen for Select Sires that completely sold out. 2172 was one of the highest accuracy Pathfinder Sires, which should help assure uniformity in your calves. The sire of Lot 16 is the legendary Columbus of Wye.

+5	+5	+25	+43	+22	+14.25	2.85	9.6

This solid **Heifer Bull** prospect successfully combines several **heifer bulls** used in our own program - Bush Ranger and Cole Creek 110 Black 782. The 163M cow, who is the maternal grandam to Sitz Wisdom, adds thickness and carcass quality.

**ALAP OF WYE UMF 8329**

Progeny of older **Wye** bulls work very well in the range environment. This year, we feature sons of **Alap**. A Columbus grandson, Alap and his sons will correct any udder. In fact, three of the Bulls sired by Alap in this sale, Lots 28, 47 and 75 are full brothers to the high-selling bull in the Wye Plantation's 2016 sale. The Wye animals add tremendous carcass quality, especially when crossed with Rito and Emulation animals. We agree with Jim Lingle, the mastermind of Wye, that they are "practical animals for the practical" producer, especially when blended with Emulation and Rito. (Many breeders believe that a Rito/Wye cross is the best.)

## SVR SVR BROAD EDDA 6146

We recommend Lot 30 as a **Cow Bull**. He should help create maternally efficient and carcass quality cattle. Lot 30's mother, the 844 Foundation Female, has an IMF ratio of 109/2 (she's been largely used in our ET program) while his sire, Express 6V47, ratios 110 on his progeny. His daughters should make great brood cows and his steers should grow and grade. 844 has sons by Emblazon, Candolier Forever 376, and Homer serving as herd sires in our registered herd and in several of our customers' herds. Lot 30 is a flushmate to Lots 4 and 66.

**Sinclair Express 6V47 is just great. We bought him because he stamped his calves and his females are just as good as his bulls, which are superb. Twelve years old, he's still at the ranch, walking out to the hills every spring.**

This **Heifer Bull** is a son of Columbus of Wye. Many regard Columbus as the best bull produced by the Wye Plantation, and close to "ideal." Widely regarded as a "legend", Columbus was valued at \$135,000 in 1968, which is \$4.32 million in today's dollars). Lot 31 is a son of 3F1, one of our most prolific Foundation Females from the N Bar Enchantress cow family. 3F1 stems from the Coffee herd. Lore has it that Tom Elliott was sold a pot load of Coffey females, culled them heavily and kept only the best. That shows in 3F1. Lot 31 is a flush brother to Lot 6.

This **Heifer Bull** is the son of Rito 149, whose cattle have flourished in our environment. His dam, 3F1, has been one of our most productive Foundation Females. We asked a couple of excellent Angus breeders if they would cross Rito 149 with a 5522 daughter (3F1), and the answer was an emphatic "Yes!" One of them said about this bull: "Keep him, don't sell him!" He is excellent and combines the best traits of 3F1 and Rito 149.

This superb animal is a genetic treasure of pure Wye genetics. Produced by the legendary Columbus of Wye out of our preeminent Foundation Female, Queen Mother 9141, this bull has excellent depth, spring of rib and will sire high quality carcass calves. Since he is in the top 1% for \$EN, his offspring will be easy-keeping and easy fleshing. Structurally correct, he will effortlessly travel miles of ground. After he is sold, you'll never have another chance to buy an animal with this genetic package. His pedigree includes three of the Wye Plantation's top three females: Colleen (who died of a broken heart after Churchill was weaned); Matilda G. and the top four Wye Four-Ton cow, Blythe.

This **Heifer Bull** should sire extremely efficient and long-lived females and prepotent maternal sons. His dam, 784, is a Foundation Female and of prototypical Bonsma kind. She has eight daughters in our herd, and two sons who serve as our herd sires. Her sire, Paramont Ambush 2172, produced 270,000 units of semen for Select Sires, which completely sold out. 2172 was one of the highest accuracy Pathfinder Sires, which helps provide uniformity as calves. Broadside calves have good thickness and length. Lot 54 daughters will be the kind to build a program around and his sons will be exceptional.

Dale and Betty Davis bred **RR Rito 707** in their famous Rollin' Rock herd. Rito 707 was the top yearling weight bull and the top-gaining bull with a gain ratio of 129 in the 1968 PIC Bull Test. He recorded an individual weaning ratio of 118 and an individual yearling ratio of 123. His first progeny test group recorded an average daily gain ratio of 111 and graded choice. His dam, Eriskay of Rollin Rock, recorded an individual weaning ratio of 108 on six calves, a progeny gain ratio of 112 on five head and a progeny yearly ratio of 112 on five head, all prior to the implementation of AHIR. His Weaning Weight EPD is nearly 40 pounds greater than the estimated average of his birth year and his Yearling Weight EPD is 70 pounds greater.

## SVR QUINTES ERIC 6151

A combination of power and finesse, Lot 56 is a **Cow Bull**. Full Bore calves have been customer favorites in past sales, going to some of our best customers. This one should be no different. While he should sire performance-type cattle for the feedlot, he has a solid maternal base through his mother, Foundation Female 844. His daughters should be soft, angular and structurally correct to cover territory and breed back over many years. Flushmate to Lot 17.

## SVR QUINTES KING 6194

**57** Birth Date: 4-21-2016 Bull \*18949471 Tattoo: 6194

+5	-.8	+16	+24	+18	+28.03	2.65	8.2

This **Heifer Bull** prospect is a maternal brother to SVR Luthien Copeland 5144 purchased by Kemnitz Angus, Platte, SD last year. His sire, Lajos of Wye UMF, is out of the Lottie family, which includes the second greatest producer of Wye Four Ton Cows - Luria of Wye. The biggest difference between Blythe and Luria - Blythe produced only males and Luria produced only heifers. Lot 59 is another complete and nicely balanced animal that will improve your herd.

**RITO 707 OF IDEAL 533 70**

**Rito 707 of Ideal 533 70**, also known as Rito 149, was a cornerstone performance sire of the Jorgensen herd. Living until 15 years of age, Rito 149 had weaning and yearling ratios of 102 and 103 with more than 2,200 daughters in production. At one time, he had more daughters achieving Pathfinder status than any other Angus bull. His progeny are really good.

## SVR RITO 149 ENCHANTED 6126

<b>60</b>	Birth Date: 4-7-2016	Bull +18908947	Tattoo: 6126

-1	+1	+17	+31	+14	+25.87	2.28	8.5

This **Cow Bull** is a son of one of the great animals produced by the Jorgensen family - Rito 149. Rito 149 was an ABS Pathfinder Sire who ranked four times in the top ten for annual registrations as a leading performance sire of his generation. It is that type of historical performance that leads us to choose tried and true ET sires. Lot 60 is a son of 3F1, one of our most prolific Foundation Females from the N Bar Enchantress cow family. She has several sons serving Registered Angus breeders: SVR Revolution 3173 at Hyline Angus in Montana, SVR Revolution 4129 at Foos Angus in South Dakota, SVR XXP Enchanted 5135 at Finks Beef Genetics in Kansas. SVR Cornerstone of Rose 1112 and SVR Revolution 4134 are making their mark in our own herd. 3F1 boasts an impressive WW ratio of 9 at 104 and YW ratio of 7 at 101.

**RITO 054 G D A R**

Gartner-Denowh Angus Ranch bred **Rito 054 GDAR**. A blend of Rito and Wye genetics, Rito 054 weighed as a mature bull 2,430 pounds with a hip height of 59 inches. He had a weaning ratio of 123 and a yearling ratio of 122. Some of his notable daughters include Miss Wix 903 of McCumber, which produced VDAR New Trend 933; Miss Wix 303 of McCumber; Susanna of CH 3030, and Cedar Hills Blackbird 2011. Luckily, we were able to find semen on this outstanding animal. Four females and one son were produced from the flush, and we're offering the son in this sale.

## SVR RITO 054 EDDA 6109

+4	+1.8	+21	+33	+25	+14.52	1.45	10.1

**Rito 054 G D A R** sired this **Heifer Bull**, who ratios 111 for WW and 109 for YW. His pedigree combines the grand O54 with the N Bar's Lady Ida family. Lot 61 has an interesting FAT EPD. Last fall, a staff member told us that rate of growth is directly correlated to a high FAT EPD - the higher the FAT, the higher the growth rate and early maturing. It makes sense. Think of the fat fourth grader who grew into a strapping Nebraska Blackshirt. Lot 61 has three full sisters in our registered herd. He will bring balanced growth, maternal ability, and range adaptability to your herd, while siring high quality feeder calves.

This **Heifer Bull** is out of our 420 Foundation Female. She blends Rito 149 with Emulation E31 into a can't miss package. 420 ratios 6/103 for WW and 4/104 for YW. Sired by Columbus, 6144's pedigree brings to life some of the most influential proven pedigrees in Angus history. Lot 75 is a flush brother to Lots 35, 44, and 45. To build superior females . . . buy them all.

We recommend him for use on **well-developed heifers and running age cows**. His dam is a Pathfinder and Broadside is his sire. He is a maternal brother to BAX Embody 97-844 who has had a grand impact on our herd as well as many of our customers' herds. Lot 76 should sire stout bulls and fertile feminine females. Past sale features have been his brothers sired by Homer and Emblazon.

This cow is out of our donor cow 113, which was very productive for us. Her sire, Cole Creek 1100 Black 782 has produced some excellent females for us. She has a 79 lb. herd sire candidate at her side.

# OUR BREEDING PHILOSOPHY AND EPDS.

We became seedstock producers because we had become increasingly dissatisfied with the bulls purchased for our commercial herd. Too often the bulls were overly finished, “melted” during the breeding season, were structurally incorrect, and had to be sent to town after one breeding season. We got tired of buying new bulls, year after year. We wanted bulls that would last and produce high quality replacement heifers and feeder calves.

So, we decided to enter the seedstock business.

We began by breeding animals using EPDs and the recommendations of those well-schooled in the EPD system. Again, we were disappointed. The animals produced by “running the numbers” did not survive in the range environment and failed to produce quality replacement females. Sale prices for our feeder calves were, at best, average.

As a result, we determined to learn from history, rather than to create or ignore it. We decided to use as breeding stock those animals that have many generations of high quality progeny.

To select genetics that work in the range environment for the cow/calf producer, we studied the great herds. We asked outstanding Angus breeders about their herds, their breeding and their breeding philosophies. The answers were readily forthcoming and are displayed in our herd and these bulls.

These SVR Bulls and their mothers are sired by great sires that have decades and generations of predictable performance. The “old” sires produced animals that meet our criteria and function extraordinarily well on the range and on forage. These older sires are proven, their breeders know what worked, and we have their history. Moreover, although moderate in frame, they were thick-bodied animals known for producing high quality carcass progeny.

Emulation cattle provide unrivaled mothering ability, fertility, calving ease, superb teat and udder structure, survivability, adaptability and longevity in the ranch environment. Wye animals, which are original Aberdeen Angus, are highly maternal, transmit calving ease, have excellent carcass quality and marble on grass. Rito/Traveler transmits muscle, adds performance, helps carcass quality and provides gain.

It is our judgment that over the last fifteen years, the industry has tended to ignore the traditional maternal Angus animal and the needs of the commercial cow-calf producers, has pushed it to be a feedlot animal, and uses the terminal EPD index -- \$B - as its primary measure. We believe the industry has not yet developed indices that fully measure the traditional maternal aspects of the Angus breed - aspects that are critical to the performance of a cowherd. Thus, we use certain . . . not all . . . EPDs to validate our breeding.

We strongly believe the terminal EPD index of \$B does not provide an effective guide for the cow-calf producer. It does not measure reproductive ability, mothering qualities, teat and udder structure, longevity and the ability to succeed on the range.

We're glad we have followed this process, because we believe recent events prove that the present EPD system using \$B as its North Star may very well be inherently unreliable.

The logo consists of the letters 'SVR' in a stylized, cursive font. The 'S' and 'V' are connected, and the 'R' is separate. The lines are thick and black.

We submit that, on July 7, 2017, the EPD system was made suspect because the baseline of analysis was changed from an historical starting point of 1977 to a starting point (or baseline) of January 1, 2010. We have been advised that statistics from bulls born prior to 2010 have been essentially eliminated from the calculation of EPDs, especially \$B. In other words, the new measures, including \$B, focus upon sires born after 2010.

We respectfully disagree with that decision. In our judgment, there is simply no way that a sire born after 2010 can be truly and adequately evaluated until generations of his progeny have been evaluated. We think the decision to essentially eliminate bulls born prior to 2010 in the calculation of EPDs is misplaced, as it ignores history and decades of performance and “non-performance.”

The system may also be inherently unreliable because EPDs can be changed at any time. On July 7, some of the “older, proven” bulls had their \$B EPD index drop by nearly 30%. Interestingly, before July 7, 2017, these bulls had the highest degree of accuracy, and were used successfully in many herds. If their pre-July 7 statistics . . . statistics with a supposed high degree of accuracy . . . can no longer be trusted, can any statistical analysis be trusted?

More troubling is that some of the post-2010, “new genetics” bulls had nearly 10% fluctuations in \$B values in just 100 days - from July 7, 2017 to October 23, 2017. This suggests that the EPDs of the unproven, post-2010, “new genetics” sires will fluctuate dramatically. Their impact will be unpredictable, at best, and may be potentially harmful. Only until they have produced generations of their own progeny can their statistics be deemed reliable.

The following table, using the terminal index \$B, illustrates the point:

Reg. No.	BD	Pre 7/7 \$B	Post 7/7 \$B	Change	% Change	10/23 \$B	Change 7/7 to 10/23	% Change
13739532	1/00	119.22	91.38	-27.84	-23%	90.28	-1.1	-1.2%
15511451	3/06	152.56	131.56	-21.35	-14%	134.60	3.05	+2.0%
15513367	3/06	177.3	132.41	-44.89	-25%	132.74	.33	+0.2%
12811512	3/07	159.84	114.37	-45.47	-28%	114.6	0.23	+0.2%
16295688	8/08	134.83	126.68	-8.15	-6%	127.8	1.21	+0.1%
17016597	1/11	177.24	128.13	-49.11	-28%	124	-4.13	-3.2%
17525526	3/13	-21.16	53.38	+74.54	+352%	46.99	-6.39	-12%
17774305	9/13	155.73	169.93	+14.2	+14.2%	151.4	-18.52	-11%

Thus, we cannot, in good faith, market animals based solely upon EPDs. Rather, we believe that decades of proven performance, validated by certain EPDs, are a better measure. We prefer not to use terminal indices, such as \$B. Such indices simply do not measure the adequacy of an animal for a cow-calf producer.

We hope the reasons for our use of “older genetics” makes sense. We want to produce animals that will replicate themselves in the cow herds while producing profitable feeder steers and heifers. Decades of experience and the eye of the veteran cattleman trump terminal EPDs for the cow-calf producer.

We look forward to seeing you on February 2, 2018.
